#### **Online Education**

- **What you should know about e-learning**
- **Highly topical field of teaching and research**
- **Didactically well-structured and clear introduction**

---

How can you make use of multimedia and e-learning environments and structure them in a sensible way? What are the cognitive, motivational and communicative preconditions that have to be met? How do meaningful teaching scenarios look like? This text book gives a well-founded overview of the psychological and didactical basics of e-learning. It combines insights from the field of psychological teaching and learning research with the development of technical feasibility in the field of multimedia

---

### **Target groups**

Students who want to become teachers, student teachers as well as students and teachers in the fields of psychology, pedagogics and computer science.

---
